## CONSTRUCTION ACTIVITY, CAYO FRANCES, CUBA 25X1B

This report was prepared in response to various NSA and DIA requirements concerning construction of an unknown nature on Cayo Frances, Cuba (Figure 1), and other possibly related activities. There is no photographic evidence at this time to indicate the construction of missile or electronic facilities on Cayo Frances, and it is believed that activity on the island is primarily related to oil exploration.

25X1D

[redacted] photographic coverage revealed unidentified construction activity on the western tip of Cayo Frances (22-38N 79-13W) consisting of a series of footings in an area approximately 370 by 30 feet. These footings have been completed to form 30 rows of 5 footings each, but no additional activity has been observed there through [redacted] and the exact purpose of the footings remains undetermined.

25X1D

25X1B

However, since [redacted] the construction of a drilling rig has been observed south of the footings (Figure 2). On [redacted] this lattice-type rig appeared complete, measuring 195 feet in height. A small vertical storage tank with a diameter of 20 feet has been constructed 350 feet east of the drilling rig.

25X1D

25X1D

In addition, road construction leading east along the northern coast is probably associated with oil exploration activity, and ground scarring at the terminus of the road (not shown in Figure 2) may be the future location for an additional drilling rig.
